

Danfo's Classic is built to withstand external and internal wear and tear.

The interior is hygienic, vandal resistant and fit for purpose. All materials have been carefully tested and evaluated, both by our development staff and by the visitors to our installations.

Classic WC

Installations with water-flushing toilets feature ceramic toilet bowls and composite basins. For particularly tough environments, the Classic can be fitted with stainless steel fittings.

Classic Tank

The Classic can also offer a comfortable alternative at sites without access to running water and sewage.

The interior in the waste tank model is durable and easy to clean, consisting of a single piece of fibre-glass reinforced polyester. A basin attached to a fresh water tank allows visitors to wash their hands.

The capacity of the waste tank is 500 litres (approx. 1600 visits).

Danfo reserves the right to make changes and improvements to the product described herein.

CLASSIC - design and quality

A public toilet in design and comfort; a toilet cabin in mobility and flexibility.

With a timeless and compact design, Danfo's Classic is a public toilet designed for almost any location.

Town centres, parks, beaches and recreational areas - the Classic works everywhere.

And since it can be installed and moved between sites very quickly, it is also a flexible solution that adapts to your current and changing requirements.

A size to fit all

Danfo's Classic is a smaller installation intended for places without the constant demand that would motivate a permanent public toilet.

However, we still recognise that the needs will vary from place to place. That's why the Classic is available with one or two toilet rooms.

Use anywhere

The Classic is available with a connection to mains sewage or with an integrated waste tank. That means you can use it anywhere it's needed, whatever conditions on site.

If you choose to connect your Classic to sewage, this is done using a simple outlet placed at the back of the building. Disconnecting it for transportation to a new site is a matter of minutes.

CLASSIC at work

RECREATIONAL AREAS

Hiking trails, ski resorts, recreational areas - the Classic offers much-needed toilet facilities without interfering with often sensitive surroundings.

GOLF COURSES

Members and guests appreciate the convenience of a public toilet along the course. With the Classic, this can be arranged easily and without disturbing the groundwork of the course.

MARINAS and BEACHES

Offering public toilets on the seaside can sometimes be difficult. Since the Classic is self-contained, the risk of pollution is not a problem.

CITY CENTRES and TOURIST DESTINATIONS

Clad with bricks, the Classic takes on a more urban appearance. With or without waste tank, it is suitable for use in cities and at well-visited tourist sites.
