

TETRAGON - interiör

OCTAGON

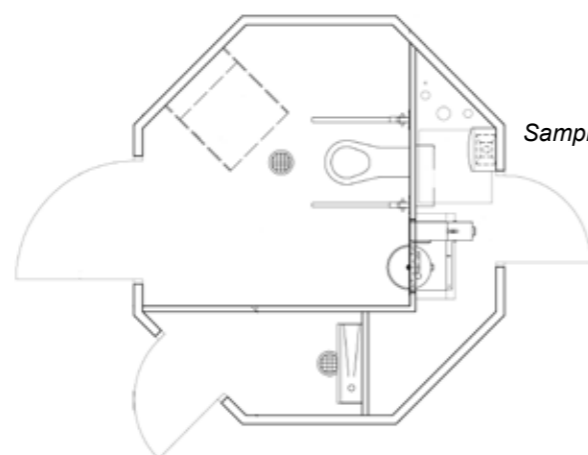

With more than 40 years' experience of designing and building public toilets, we know how demanding the harsh reality can be.

Danfo's public toilets are built to withstand external and internal wear and tear.

The interior is hygienic and vandal resistant. All materials have been carefully tested and evaluated, both by our development staff and by the visitors to our installations. Important functions, such as flushing and hand washing, are automatically controlled for maximum user-friendliness.

The result is a public toilet that is comfortable for visitors, easy to maintain for managers - and long lasting for everyone.

OCTAGON

"I deem it to be the duty of every civilised city to provide and maintain toilet facilities for the public"

Jakko Markkula, city architect, Helsinki, Finland

An eye-catching installation, Danfo's Octagon adds a touch of modernity to its surroundings.

With its eight walls and many angles, the building has an exciting design.

The exterior can be varied with a range of different façade materials, so that the facility can be adapted to its location.

The compact installation offers space for up to two comfortable, user-friendly toilet rooms.

A practical as well as attractive public toilet, Octagon is ideal for use in urban environments.

OCTAGON

Octagon offers a number of well-chosen features, making it an ideal city toilet.
