

## PARAGON - interiör

## PARAGON

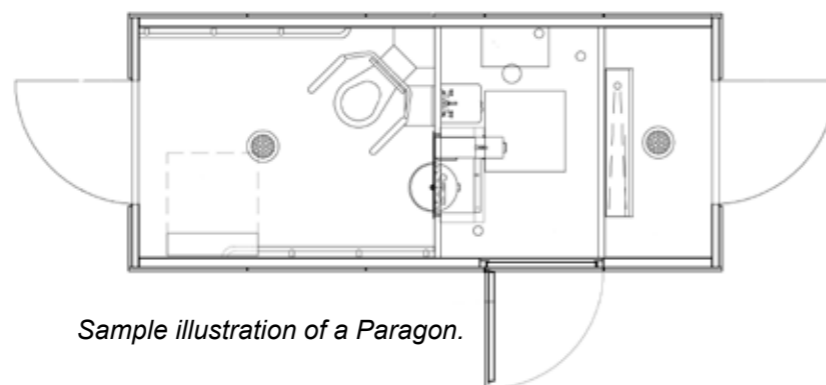

With more than 40 years' experience of designing and building public toilets, we know how demanding the harsh reality can be.

Danfo's public toilets are built to withstand external and internal wear and tear.

The interior is hygienic and vandal resistant. All materials have been carefully tested and evaluated, both by our development staff and by the visitors to our installations. Important functions, such as flushing and hand washing, are automatically controlled for maximum user-friendliness.

The result is a public toilet that is comfortable for visitors, easy to maintain for managers - and long lasting for everyone.

Sample illustration of a Paragon.

*- public toilet  
for urban environments*

# PARAGON

*"I deem it to be the duty of every civilised city to provide and maintain toilet facilities for the public"*

Jakko Markkula, city architect, Helsinki, Finland

Paragon is a modern and comfortable public toilet with a classical design.

The elegant silhouette complements most urban environments.

With a façade of marbled metal plating, the building exudes character and quality.

The result is a city toilet of the highest class.

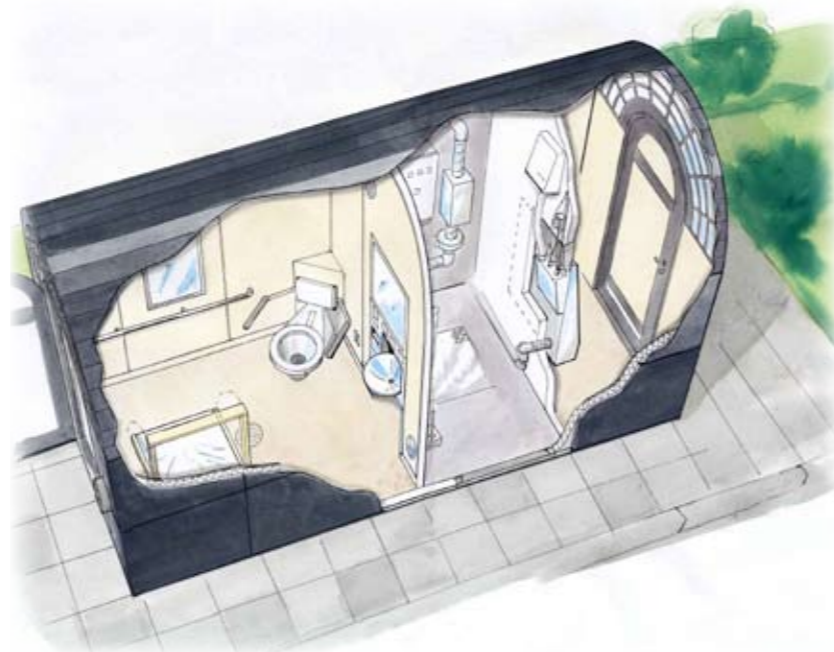

Paragon was designed in 1989 by a leading Swedish architect.

It has become one of Danfo's most popular toilet models, as well as a signature building of Stockholm.

Paragons can also be visited in cities such as Riga, and Tallinn.

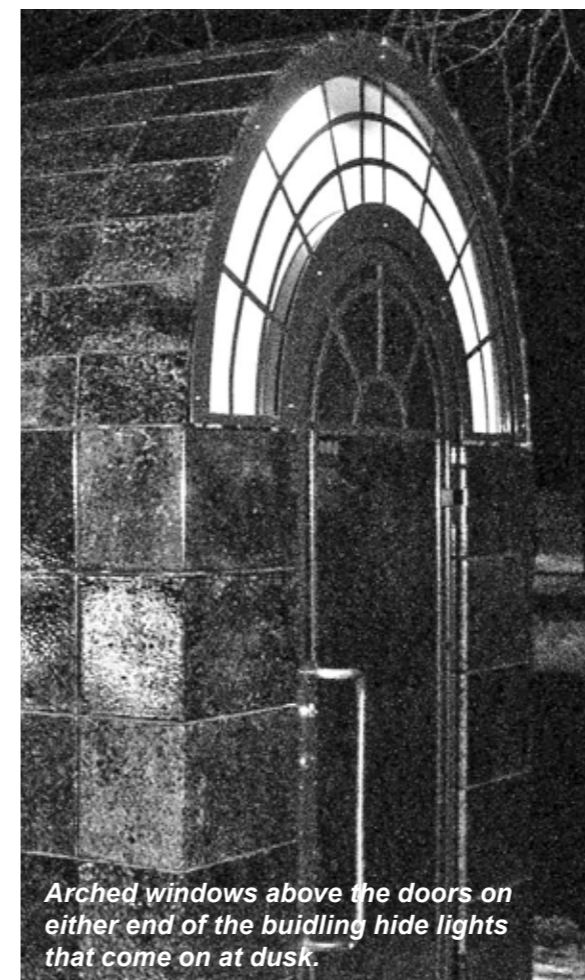

The characteristic shape, the building's trademark, remains the same everywhere, but the colour of the façade can be adapted

# PARAGON

*Well-chosen details complete the design and lend an exclusive air:*

*Arched windows above the doors on either end of the building hide lights that come on at dusk.*

*The building can be fitted with a sign on the roof. This is also lit at night-time.*

*Even the gutters in front of the building are shaped to echo the arched roof.*
